Click the photos and drag
to view from every angle

Windows Panel Control Software

Desktop software designed for 360° product photography; offers a fully equipped workflow experience with advanced control and editing features.

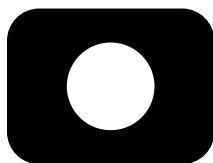

Camera Control

Easy and professional camera control with live preview, exposure and focus adjustment, automated shooting scenarios, and synchronized angle capture with the turntable.

Pikup Control

With 0.1° precision motor control and adjustable positioning, achieve smooth and professional results in every shot.

Mask

Easily remove backgrounds with advanced masking software, providing full control over image editing through automatic and manual options.

LED Control

Customize the LED lighting's brightness, color temperature, and light direction to achieve perfect visuals in every shot.

Scenario shooting

Save LED, turntable, and camera settings to create scenarios, automate your workflow, and save time.

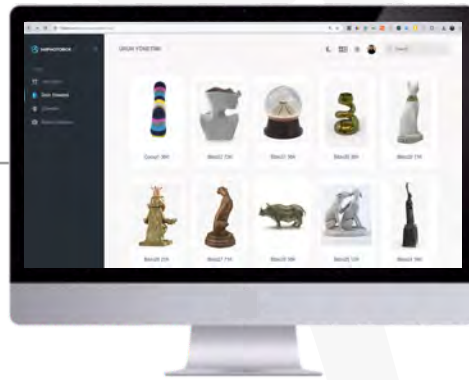

Shooting System

The system synced with the camera, LED, and turntable automatically captures products from every angle with customizable frames via remote control, delivering fast and consistent results.

Cloud Panel Software

Manage, edit, share, and analyze
your 360° product visuals from a single panel.
Simplify your process with its cloud-based structure.

e-Catalog Creation

Create automatic, professional, and easy e-catalogs from your product photos using ready-made templates, customizable designs, and practical editing tools.

360° Spin Viewer

Showcase 360° photos interactively; you have full control with zoom, auto-rotation, speed, sensitivity, and loop settings.

Background Removal

Automatically remove the backgrounds of your product images in seconds with advanced AI; add your desired colors and scenes for flawless results.

GIF & Video Production

Convert your 360° photos to GIF or MP4 video with one click; achieve fast and easy results with various quality and resolution options.

Batch Photo Editing

Quickly and consistently edit your photos with backgrounds, logos, slogans, colors, and graphics. Your edits automatically apply to all 360° visuals, saving you time.

E-Commerce Integration

Easily integrate 360° photos and videos into your e-commerce site with a single-line iframe code; offer a dynamic shopping experience.

Social Media Content

Create content suitable for all social media platforms with automatic resizing and editing in story, post, and reel formats.

QR Code Generation

Enable your customers to interactively explore your products in 360° on mobile devices using custom QR codes. It's an ideal solution for both physical and digital presentations.
